Portfolio: pedro.pampaiter.com

HIGHLIGHTS

- **9+ years of native Android** with Kotlin and Java, in banking, hospitality, health, e-commerce and video.
- **Lead architect** of Hyatt's new global app, and developer of Santander Key, the security module of Banco Santander's app.
- **Video with ExoPlayer:** TikTok-style vertical feed at AgonUp. **Real hardware:** Bluetooth LE on a medical device.
- **Own app published** on Google Play and the App Store with Kotlin Multiplatform, with evaluated AI: 24 of 25 correct in the latest review.

PROFILE

Senior Android developer. I take features from definition to production, with tests and CI, and I work daily with AI agents to write and review code. Looking to join an Android team.

EXPERIENCE

Freelance Senior Android Engineer · Consulting — 10/2020 – Present

Client projects, directly and through consultancies (The Left Bit, O2O, Fusuma):

Polymarket, via The Left Bit · Senior Android Engineer

Real-time trading and chat

- **Architecture and quality with AI:** I proposed the app's architecture (Clean Architecture with MVI) and designed the team's way of working with AI: code guides, automatic checks on every change and architecture tests, so that AI-written code stays in order.
- **Continuous integration and tests:** I set up the CI that builds and tests every change, and I look after the unit tests.
- **Technical lead:** code reviews, mentoring junior developers and visual parity with iOS in Jetpack Compose. With The Left Bit, also Naturitas (main app) and Mediquo (legacy code migration).

Banco Santander · Senior Android Developer

Banking

- **Santander Key and Bizum:** built the security and authorisation module and the payments integration, in the Spain Squad.
- **Main menu:** full refactor for millions of active users, and CI/CD pipelines for release distribution.

Hyatt Hotels & Resorts, via O2O · Android Architect

Hospitality

- **Global app from scratch:** lead architect of Hyatt's new app, 100% Kotlin and Jetpack Compose with MVVM and Clean Architecture.
- **Quality:** high unit and UI test coverage. Other projects with O2O: Correos Prepago, ONCE and Baleària.

AgonUp · Senior Android Developer

Video challenge app (agonup.com)

- **Complete Android app:** TikTok-style vertical video feed where each video is a challenge other users join to compete.
- **Playback with ExoPlayer:** swiping between videos, play, pause and seek, with the player managed by the screen lifecycle.

Públi.co, via Fusuma · Android Developer

- **Coworking app from scratch:** modular architecture and real-time bookings.

InsulCloud · Android Developer

- **Bluetooth Low Energy with real hardware:** full GATT cycle (scanning, connection and reconnection, services, characteristics and notifications) for a smart insulin pen cap used daily by patients.

Aiwin · Mobile Developer 01/2019 – 10/2020

- **Corporate gamification (MIGO):** offline-first data sync.

Healix España · Software Developer 07/2017 – 01/2019

- **Android traveller-safety app** (Kotlin, Java, Dagger, RxJava) and admin dashboards (Node.js, Vue.js).

OWN PROJECT

Aura · AI training app

Published on Google Play and the App Store (aura.pampaiter.com)

- **Solo, end to end:** Kotlin Multiplatform with Compose Multiplatform for Android and iOS, and my own Ktor and PostgreSQL backend. I make the architecture and product decisions.
- **AI code without losing quality:** every feature starts from acceptance criteria I approve. One agent writes the tests first, another writes the code until they pass, and a third, which knows nothing about the previous two, reviews it looking for faults.
- **Automatic checks:** the code only moves on if it passes the architecture tests, static analysis, a minimum coverage on new code, and the secrets and dependency scans. It is also tested end to end on an emulator, and mutation tests measure the new tests.
- **Measured AI:** Gemini turns a photo of a whiteboard into a workout; evaluated with my own test bench, 24 of 25 correct in the latest human review.
- **Delivery:** CI with unit tests and visual regression, automated releases to Google Play and TestFlight, subscriptions with RevenueCat.

TECHNICAL SKILLS

- **Languages:** Kotlin (Coroutines, Flow), Java, Swift.
- **Android:** Android SDK, Android Studio, Jetpack (Compose, ViewModel, Navigation), ExoPlayer, RxJava, Dagger, Koin, Retrofit, Ktor.
- **Multiplatform:** Kotlin Multiplatform, Compose Multiplatform, SwiftUI.
- **Architecture:** Clean Architecture, MVVM, MVI, SOLID, modularisation.
- **Quality and delivery:** JUnit, Espresso, MockK, Roborazzi, Maestro (end-to-end tests), Konsist (architecture tests), detekt, Android Lint, Kover, Git, CI/CD (Jenkins, GitHub Actions), Firebase, Sentry.
- **Applied AI:** AI agents (Claude Code), agent-driven test-first development, assisted code review, quality harness with automatic checks, Gemini API.
- **Connectivity:** Bluetooth Low Energy, REST APIs, offline-first sync.
- **Methodologies:** Agile, Scrum, code reviews.

EDUCATION

BSc in Software Engineering · Universidad Complutense de Madrid · 2013 – 2017

Courses: Jetpack Compose (Antonio Leiva, 2022) · Kotlin for Java Developers (JetBrains, 2021) · Machine Learning (Coursera, 2018)

LANGUAGES

Spanish: native · English: B1, daily meetings in English at Polymarket
